

# Docuteam-Migrationspfade für Dateiformate

Im digitalen Archiv werden in aller Regel nur einige wenige Dateiformate aktiv gepflegt. Digitale Akten müssen – sollen sie langfristig aufbewahrt, migriert und auch genutzt werden können – in diese Formate überführt werden. Diese File-Registry zeigt auf, welche Formate wir für die Archivierung verwenden.

Generell verweisen wir in unseren Projekten auf den [Katalog archivtaugliche Dateiformate](#) des Schweizerischen Bundesarchivs.

## Die wichtigsten Archivformate

Art der Daten	Offizielles Archivformat	vorläufig akzeptiert	wird durch docuteam feeder automatisch migriert
Text (Office)	PDF/A	DOCX	Ja, nach PDF/A
Text	TXT (Plaintext)		Nein
Tabellen	PDF/A	XLSX (CSV bringt keinen Mehrnutzen gegenüber dem XML-basierten XSLX)	Ja, nach PDF/A, XLSX wird nicht konvertiert
Rasterbilder	TIFF, JPEG2000		Ja, nach TIFF
Video	FFV1	für SD: Digital Video Encoding (DV, DVCAM, DVCPRO)	Nein
Audio	WAVE		Ja, nach WAVE
Markup	XML		Nein
E-Mail	EML oder PDF/A		Ja, nach PDF/A
Webseiten		WARC	Nein

## Ungeeignete Fileformate

Unter dieser Rubrik finden sich Fileformate, die nicht für die Langzeitarchivierung geeignet sind und die wir nicht in ein Langzeit-Repository übernehmen. Aufgrund ihrer weiten Verbreitung müssen wir jedoch in der Lage sein, sie in Formate umzuwandeln, die langfristig archivierbar sind.

- doc, xls, ppt (binäre Microsoft Office-Formate vor Office 2007. Die neuen Office-Formate sind XML-basiert, daher ist ihr Inhalt auch ohne Office-Applikationen zugänglich)
- rtf (Binäres, MS-kontrolliertes Format für Textverarbeitung, welches für den Austausch zwischen verschiedenen Applikationen entwickelt wurde, heute aber kaum noch verbreitet ist)

## Die Standardkonfiguration für Formatmigrationen durch docuteam feeder

Die Standardkonfiguration für Formatmigrationen, wie sie in Feeder vorliegt (spezifiziert im migration-config.xml), ist wie in den folgenden Tabellen definiert. Bei der Dateimigration geht Feeder zunächst

nach der PUID einer Datei. Kann diese nicht bestimmt werden, wird der Mimetype gesucht. Liegt auch dieser nicht vor, berücksichtigt Feeder schliesslich die Dateieindung. Im Folgenden sind die drei Tabellen (Konvertierung nach PUID, Mimetype oder Dateieindung) eingefügt, welche die spezifizierten Migrationen enthalten. Alle anderen Formate werden NICHT migriert. Diese Standardkonfiguration kann angepasst werden.

Folgende 3 Tabellen sind unten aufgeführt:

- Formatmigration anhand PUID (1. Priorität)
- Formatmigration anhand MIMEType (2. Priorität)
- Formatmigration anhand Dateieindung (3. Priorität)

Wie man in den Tabellen sieht, werden als Archivformate im Moment pdf, tif und wav generiert.

Die Tabellen enthalten jeweils in der ersten Spalte die PUID der Quelldatei, in der zweiten Spalte deren Name. Die dritte, vierte und fünfte Spalte zeigen, in welches Format die Quelldatei migriert wird (PUID, Name und Dateieindung).

(Stand: 25.03.2019)

### Anhand PUID (1. Priorität)
